**NUCLEAR WARHEADS  
ELIMINATED**

### A Milestone Is Reached

Megatons to Megawatts (M2M) is a 20-year U.S. and Russian government program to eliminate 500 metric tons of Russian nuclear warhead material by diluting it into nuclear fuel. In September 2005, we reached the halfway mark. American nuclear power plants use this recycled fuel to generate 10 percent of the nation's electricity. M2M is commercially operated by USEC Inc. and TENEX at no cost to taxpayers.
